

## Energy Initiatives In Exeter

The Town of Exeter is always looking into ways to reduce our energy consumption. Not only are such measures environmentally friendly but they are also important ways to reduce the energy costs of the Government. By reducing Exeter's consumption of oil, natural gas, and electricity we are not only helping the planet but we are helping our taxpayers.

### Waste Water Solar Array

One such project is the solar array at the Exeter Wastewater Treatment Plant. This array has reduced Exeter's Carbon Foot Print by over 16,000 lbs. of Carbon by saving the Town more than 800 Gallons of Gasoline. For a current record of the energy out put of the solar array and its impact on the environment - [Click Here](#)

### Local Business Initiatives

Local Business owner can also get support for energy saving initiatives from the State of New Hampshire. Programs exists to reduce the use of electric and gas utilities. For these and other ways to reduce your business's carbon footprint and overhead - [Click Here](#)
